

VTSERVER **Version 4.6.0** Now available

Stronger security, the features you asked for — and a **brand-new emulator.**

vtServer 4.6.0 delivers the latest software security standards alongside a set of long-requested enhancements across vtAlpha and vtVAX, plus the debut of vtSparc — virtualization for Sun SPARC systems running Solaris.

Stay secure

A new kernel implements the latest software security standards to keep legacy workloads protected.

Do more

Broader device support, higher storage limits, and improved DSSI performance — from your requests.

Extend further

vtSparc brings the same trusted virtualization approach to Sun SPARC and Solaris environments.

NEW KERNEL

V6.12.56

The 4.6.0 kernel implements the latest **Software Security Standards**, hardening the host environment that runs your virtual Alpha, VAX, and SPARC systems — with no changes required to your guest software.

WHAT'S NEW BY PRODUCT

vtAlpha

Virtual Alpha emulation

DE504 & DE602 Ethernet

Support added for two additional Ethernet devices.

Disable Ctrl-P

Option to disable Ctrl-P on Alpha consoles for tighter control.

vtVAX

Virtual VAX emulation

Up to 56 SCSI units

Attach up to 56 storage units on SCSI adapters.

Faster DSSI

Significantly improved DSSI performance on VAX 4000 models.

vtSparc

NEW

Virtual SPARC emulation

Sun SPARC virtualization

A new emulator that virtualizes Sun SPARC machines.

Runs Solaris

Move Solaris workloads onto modern hardware, unchanged.

HARDWARE & COMPATIBILITY

A full Hardware Compatibility List for vtServer 4.6.0 is available. Contact us to confirm your host configuration before upgrading, or to review supported storage, networking, and platform options.

Ready to upgrade to 4.6.0?

Your Annual Software Support Service includes access to the latest product versions. Contact Salem Automation to plan your upgrade.
